hospital admissions every year in the United States costing over 3.2 billion healthcare dollars annually. Langlois, Rutland, Brown, and Thomas (2006) estimate that 71% of TBI hospitalizations are for patients with severe injuries necessitating critical care monitoring (Russo & Steiner, 2007).

**Volume 42 Number 2 Nursing Interventions for Critically Ill Traumatic Brain Injury Patients**

April 18th, 2019 - Nursing Interventions for Critically Ill Traumatic Brain Injury Patients, Molly M McNett, Anastasia Gianakis

**ABSTRACT**

Neuroscience intensive care unit (ICU) nurses deliver a number of interventions when caring for critically ill traumatic brain injury (TBI) patients. Yet there is little research evidence documenting specific interventions. A study was conducted to identify and describe interventions used by ICU nurses in the care of critically ill TBI patients. The study findings provide evidence-based practice guidelines for nurses caring for critically ill TBI patients.
